Tip #868: Structuring Adaptation Through Inclusive Participation

Overview

Adaptive, inclusive learning design, where tasks, equipment, rules and environments are adjusted to support participation for all students, is not a special accommodation but a core feature of quality teaching. When teachers design activities with flexibility built in from the start, including multiple entry points, varied resources and adjustable success criteria, they create cross-curricular learning experiences that serve the full range of student abilities without singling out individual students for separate treatment. Universal design supports every learner, not just those with identified needs.

Key Teaching Ideas

Strong adaptation requires teachers to anticipate the range of student needs before the lesson and build flexibility into the task structure. This means offering multiple ways to participate, for example, a collaboration task that students can complete through discussion, movement, visual response or practical demonstration, and ensuring that each option is presented as a genuine choice rather than a lesser pathway. Teachers can involve students with additional needs in the planning process, asking what would make the activity accessible, engaging and achievable. The goal is a cross-curricular learning program where every student is meaningfully involved, not just present.

Practical Application

- **Multi-Entry Task Design**: Design each activity with at least three participation options at different challenge levels, presenting them as genuine choices rather than ability-based assignments.
- **Resource Modification Libraries**: Maintain a library of flexible resources, such as visual prompts, tactile materials, larger templates, adapted tools and alternative response options, that students can select based on their current needs and goals.
- **Adjustable Success Criteria**: Define success through personal progress, effort, understanding and contribution rather than one fixed performance standard, ensuring every student can experience genuine achievement.

- **Sensory Consideration Planning**: Identify potential sensory challenges in each learning experience, such as noise, lighting, group size or physical proximity, and plan modifications or alternative spaces for students who need them.
- **Student-Led Adaptation**: Ask students to suggest modifications that would make a task more accessible or challenging, building self-awareness, confidence and self-advocacy alongside curriculum understanding.

Next Steps

Active Education Australia has resources on inclusive learning design and differentiated task planning for diverse learners. Anywhere PD includes practical tools for universal design, task modification and inclusive assessment across learning areas.
